

Preparing MTI Locks™ for MTI Connect® Managed Access™

Getting Started

The following items can be found in store. Please locate before proceeding to the steps below:

MTI Connect®
IntelliKey™

MTI Connect®
Hub

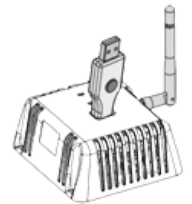

MTI Connect®
Network Pairing Card

MTI Versa Key™ User Card
(that is currently activated)

Add lock to Store MTI Connect® System

- 1 Insert the MTI Connect® IntelliKey™ into the MTI Connect® Hub for 10 seconds to activate pairing mode. It will begin flashing blue on the system status light. It will be in this mode for 15 minutes.
- 2 Ensure the lock has a battery inserted. When a battery is initially inserted you will hear a confirmation beep.
- 3 Tap the Network Pairing Card against the lock. The lock will beep twice and then start slowly beeping.
- 4 The lock will continue with a slow beep indicating that the lock is searching for the mesh network. Once that is found the lock will double beep to confirm it has found your mesh network. This can take up to 2 minutes.
- 5 Tap an activated Versa Key user card against the lock to confirm that Managed Access is now enabled (able to open the lock).
